LEED® Information for CMC Manufactured Products

CMC has prepared the following information to assist in the calculation of credits for CMC manufactured products being used in “Green Building” applications or for projects in the LEED® 2009 Edition under the United States Green Building Council. Percentages are based on the total weight of the final products.

CMC owns scrap metals recycling processing facilities, minimill and micromill steel producing facilities and steel fabrication facilities throughout the United States that are many times located within 500 miles of a building project site.

For information on a specific project’s point contribution, please contact the CMC LEED® representative at the respective facility as shown on the attached list.

MR Credit 4: Recycled Content

LEED® Materials & Resources Point Credits for Recycled Content of CMC’s products may be calculated from the table below.

The CMC Steel Mills in the United States utilize the electric-arc furnace method in the production of steel products. The predominant source of raw material for the melting process is derived from recycled steel (ferrous) scrap (refer to the table below). Remaining resources (non-recycled content) added to the molten metal includes fluxes and alloys to establish the final chemistry of the heat of steel.

CMC Mill Location	Non-recycled	MR 4 - Recycled Content		
		Post-consumer	Pre-consumer	TOTAL Recycled (a)
Birmingham, AL	2.0%	89.2%	8.8%	98.0%
Cayce, SC	3.0%	74.7%	22.3%	97.0%
Durant, OK (micromill)	3.0%	88.0%	6.0%	97.0%
Jacksonville, FL	2.5%	90.6%	4.3%	97.5%
Knoxville, TN	1.0%	77.6%	18.4%	99.0%
Magnolia, AR	No Melt Shop but billets are provided by CMC Steel Mills			
Mesa, AZ (micromill)	3.0%	95.1%	1.9%	97.0%
Rancho Cucamonga, CA	1.0%	92.6%	5.1%	99.0%
Sayreville, NJ	1.0%	76.5%	15.7%	99.0%
Seguin, TX	3.0%	78.6%	18.4%	97.0%

(a) Only the TOTAL Recycled percentage is eligible for the Regional Materials Credit MR5. The non-recycled % is not tracked and typically would not qualify if tracked. LEED allows a portion of the material to qualify for MR5, so use the TOTAL Recycled % as a multiplier against the Materials Cost.

MR Credit 5: Regional Materials

LEED® Materials & Resources Point Credits for Regional Materials Content of CMC's products may be calculated from the table above and from the attached maps of fabrication facility and mill locations. The TOTAL recycled content represents the fraction of our product that may be eligible for the Regional Materials credit. To determine if that % qualifies, use the attached maps for the mill and fabrication facilities to determine if your project is within 500 miles and if so then multiply by the TOTAL Recycled % for the source mill.

To qualify for the Regional Materials Credit, the material needs to be manufactured AND extracted, harvested or recovered within 500 miles of the project site. The fabrication facility is the point of manufacture and the mill is the point of harvest. CMC owns and operates 90 rebar fabrication shops and 10 steel mills in the United States.

Together, CMC mills and fabricating facilities are located within a 500-mile radius of many building projects in the United States. Refer to the attached CMC facility maps and listings for specific locations. Contact the listed LEED representative for specific project information.

CMC Mill Locations

○ Indicates a 500-mile radius

CMC STEEL FACILITIES

CMC Steel Alabama

101 South 50th St.
Birmingham, AL 35212

Contact
